L4 ANSWER 1 OF 4 CAPLUS COPYRIGHT 2004 ACS on STN

ACCESSION NUMBER: 2001:849718 CAPLUS

DOCUMENT NUMBER: 136:160844

TITLE: 3D-quantitative structure activity relationships of
biphenyl carboxylic acid MMP-3 inhibitors: exploring
automated docking as alignment method

AUTHOR(S): Muegge, Ingo; Podlogar, Brent L.

CORPORATE SOURCE: Bayer Research Center, West Haven, CT, 06516, USA

SOURCE: Quantitative Structure-Activity Relationships (2001),
20(3), 215-222

CODEN: QSARDI; ISSN: 0931-8771

PUBLISHER: Wiley-VCH Verlag GmbH

DOCUMENT TYPE: Journal

LANGUAGE: English

AB A series of CoMFA models have been derived from docking-based and
atom-based alignments. The statistics of these approaches has been
compared to det. whether a docking approach can be employed as an
automated alignment tool for the development of 3D-QSAR models. Using a
well-characterized training set of 51 biphenyl carboxylic acid MMP-3
inhibitors, the docking-based alignment provided by a DOCK4/PMF-scoring
protocol has yielded statistically significant, cross-validated CoMFA
models comparable to those derived with a traditional atom-based
alignment

technique. Field fit minimization has been applied to refine the
atom-based and docking-based alignments. The refinement appears to be
beneficial for the docking-based approach. For the atom-based alignment,
however, field-fit refinement has not resulted in improved CoMFA models.
The statistically best CoMFA model has been created by the atom-based
alignment that has been found, however, to be inconsistent with the
stromelysin crystal structure. The docking alignment refined by
field-fit

alignment has resulted in a final alignment that is consistent with the
crystal structure and only slightly statistically inferior to the
atom-based aligned CoMFA model. The results show the ability of an
automated docking/field-fit alignment technique to provide
self-consistent

CoMFA alignments.

 ACCESSION NUMBER: 2000:439095 CAPLUS
 DOCUMENT NUMBER: 133:219279
 TITLE: Evaluation of docking/scoring approaches: a comparative study based on MMP3 inhibitors
 AUTHOR(S): Ha, Sookhee; Andreani, Romana; Robbins, Arthur; Muegge, Ingo
 CORPORATE SOURCE: Bayer Research Center, West Haven, CT, 06516, USA
 SOURCE: Journal of Computer-Aided Molecular Design (2000), 14(5), 435-448
 CODEN: JCADEQ; ISSN: 0920-654X
 PUBLISHER: Kluwer Academic Publishers
 DOCUMENT TYPE: Journal
 LANGUAGE: English
 AB An increasing no. of docking/scoring programs are available that use different sampling and scoring algorithms. A reliable scoring function is the crucial element of such approaches. Comparative studies are needed to evaluate their current capabilities. DOCK4 with force field and PMF scoring as well as FlexX were used to evaluate the predictive power of these docking/scoring approaches to identify the correct binding mode of 61 MMP-3 inhibitors in a crystal structure of stromelysin and also to rank them according to their different binding affinities. It was found that DOCK4/PMF scoring performs significantly better than FlexX and DOCK4/FF in both ranking ligands and predicting their binding modes. Most notably, DOCK4/PMF was the only scoring/docking approach that found a significant correlation between binding affinity and predicted score of the docked inhibitors. However, comparing only those cases where the correct binding mode was identified (scoring highest among sampled poses), FlexX showed the best fine tuning (lowest rmsd) in predicted binding modes. The results suggest that not so much the sampling procedure but rather the scoring function is the crucial element of a docking program.

OTHER SOURCE(S): MARPAT 125:142275

AB Matrix metalloprotease inhibitors TxA-B-D-E-G [Tx = substituent such as halo, C1-C10 alkyl, or cyanoalkenyl; x = 0, 1, 2; A, B = arom. or heteroarom. ring; D = CO, CH(OH), CH₂, C:NOH, C(S); E = substituted carbon

chain; G = PO₃H₂, CO₂H, CO₂NH₂, etc.] and their pharmaceutically acceptable salts were prepd. Thus,

(S)-.gamma.-oxo-4'-(pentyloxy)-.alpha.-(3-phenylpropyl)-[1,1'-biphenyl]-4-butanoic acid (86) was prepd. via alkylation of di-Et (3-phenylpropyl)malonate with 2,4'-dibromoacetophenone, followed by sapon.-monodecarboxylation, reaction

with 4-methoxybenzeneboronic acid, Me ether cleavage, and O-pentylation. The synthesized compds. (444) were assayed for inhibition of MMP-3, MMP-9, and

MMP-2. Using compds. such as 86, the no. of tumor metastases was decreased between 38 and 49% as compared to the control. The title compds. were also assayed for inhibition of cartilage lesions in a guinea pig model of osteoarthritis.
